Technology at work for you

connecting your business to the technology resources you need

Plexus has been selling, installing and servicing business telephone equipment for over twenty years, and we have achieved an enviable reputation of providing excellent service with quality products. We offer a professional one window interface for all your telecommunication products, services and business equipment requirements. Plexus also offers a range of peripherals to further enhance your telephone system.

Flexible data & voice solutions for your business needs

FIBRE OPTICS

Fibre optic cables are long strands of optically pure glass or plastic as fine as a human hair. They can transmit digital information over long distances with minimal distortion. Fibre optic cables are used for telecommunications because signals travel faster and with less loss than with traditional metal wires. Benefits include;

- **Bandwidth** - Fibre optic cables have a greater capacity (bandwidth) than copper wires
- **Security** - Optical communication can't be tapped as easily as electrical transmission
- **Speed** - fibre optic cable networks operate at a much higher speed
- **Maintenance** - fibre optic cables are less expensive to maintain

VOICE & DATA CABLING SPECIALISTS

At the heart of any good telephony and IT solution is a well-structured, properly installed cabling system.

A good cabling system will provide the backbone of your technology, ensuring file sharing, voice calls and internet use are all achieved at the highest speed and quality that your equipment can provide.

We follow stringent installation & testing guidelines so we can provide customers with;

- Outstanding performance
- Reliability
- Manageability
- Potential for growth
